GREETINGS

Dear Friends: Another summer will soon be here, and most of us are planning our garden. We are encouraged to plant flowers as well as vegetables in our Victory Garden this year. I hope Gladiolus will be one of the flowers grown as I know they grow their best, when planted in rows in the garden.

Last summer many of our larger growers of Gladiolus were unable to get the help to care for as large an acreage as other years. This made a shortage of flowers last summer and of bulbs this spring.

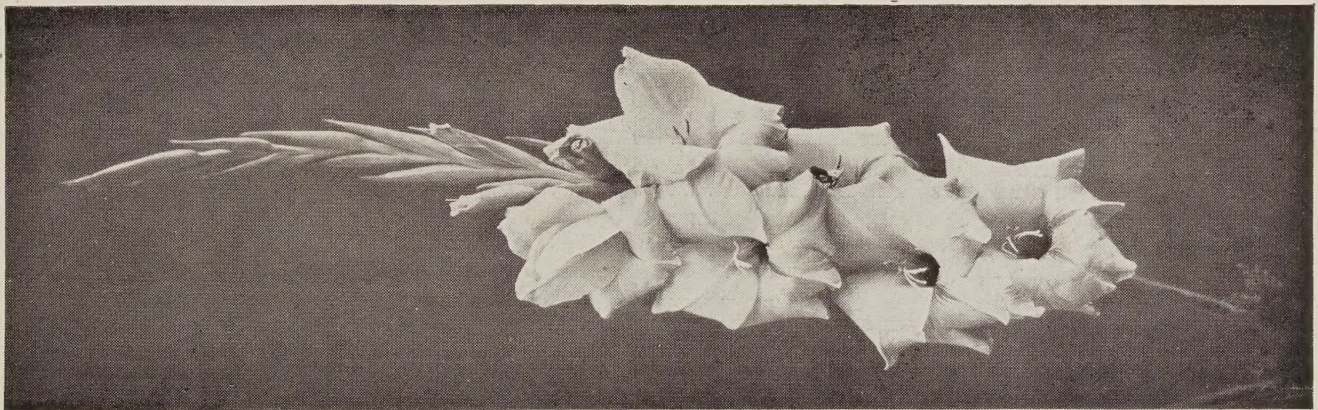

In the summer I work most of the time each day in my garden. The time does not seem so long when we are busy, and this is the work I can do best.

I enjoy receiving letters and meeting people who are interested in Gladiolus. Have been a member of the New England Gladiolus Society ever since 1927, and am a Life Member of the Michigan Gladiolus Society, also a member of the Mid-West Gladiolus Society.

While I write I am thinking of all those in service over seas who are fighting and working that we may be safe. Don't forget to write to them often, and now I must stop, and write to my son, who is a Seabee located on some island in the Pacific. Best wishes to all of you,

Sincerely,

MRS. GEORGE KINYON.

If you do not find listed the variety you want, write us about it. We have many varieties in too small quantities to list, but could spare you a few.

TERMS: At the prices quoted anywhere in this list we will prepay delivery on orders amounting to \$1.00 or more, to any part of the U. S. You may order 5 bulbs at 10 rate.

Every precaution is taken to produce clean, true to name bulbs. Any bulbs that prove not true to name will be gladly replaced. There will be no substitution of variety without permission.

GLADIOLUS CULTURE

PLANTING—Gladiolus can be planted at about the time leaves on trees are starting to show green, up to the middle of June. I like early planting best.

SOILS—They can be planted in any good garden soil that has been plowed or spaded to the depth of 8 or 10 inches.

PLANTING DISTANCE—If planted in rows, space rows from 18 to 30 inches apart. Opening a trench to the depth of about 6 inches and make an application of your favorite complete fertilizer. Use about 4 lbs. to 100 feet of row, then work well into the soil, so the bulb will not come in contact with the raw fertilizer. Set the bulbs top up 4 or 5 inches apart and in sandy soil 5 or 6 inches deep. In clay soil do not plant so deep.

SUMMER CARE—Cultivate the soil frequently throughout the summer, to keep down the weeds. Water when necessary by soaking the soil thoroughly. Deep watering stimulates healthy root action.

CUTTING—In cutting the blooms leave at least 4 leaves on the plant to mature the bulb.

DIGGING—Dig the bulbs carefully when the foliage is turning brown, but always before hard freezing weather. Cut the stems off close to the bulb, and dry the bulbs in a frost proof airy shed for about three weeks, then the old mother bulb can be removed, leaving a clean new bulb or bulbs.

STORAGE—Store in a frost proof cellar. A temperature of about 40 degrees is best. Place in shallow trays, and the different varieties can be placed loosely in thin cloth bags. Tie and label as to name of variety.
